

On the interface between basic and applied microbiology studies —

MICROBIOLOGY 1980

Editor: David Schlessinger

This new volume in the popular annual **Microbiology** series features the proceedings of several recent symposia, and one particularly important NIH Conference on **Endogenous Mediators of the Host Response to Endotoxin**. While the volume has obvious appeal to infectious disease specialists and applied microbiologists, the material on endotoxins and viruses is of particularly wide interest to many microbiologists.

This timely and up-to-date record traces the progress being made in the following major areas of microbiology:

- Endogenous Mediators of the Host Response to Endotoxin
 - Host Response to Viral Infections
 - Interferon: Induction and Action
 - Comparative Mechanisms of Viral DNA Replication
 - Integration of the Viral Genome
 - Hybridomas
 - DNA-Surface Interactions
 - Aquatic Microbial Ecology
-

Ordering Information

January 1980. 400 pages. Clothbound. ISBN: 0-914826-23-9. \$22.00. (ASM Members may purchase this volume, for personal use only, at the special price of \$12.00. **Payment must accompany member orders.** Orders from overseas must be prepaid before shipment.)

Standing orders to the ASM **Microbiology** series are welcome. The previous volumes in this series are still available, all priced at \$12.00 prepaid for ASM Members, \$22.00 for others:

Microbiology — 1979, Microbiology — 1978
Microbiology — 1977, Microbiology — 1976
Microbiology — 1975, Microbiology — 1974

Now available as a clothbound book—

APPROVED LISTS OF BACTERIAL NAMES

Edited by V. B. D. Skerman, Vicki McGowan, and P. H. A. Sneath
on behalf of the Ad Hoc Committee of the Judicial Commission of the
International Committee on Systematic Bacteriology

Reprinted from the January 1980 issue of *Journal of Systematic Bacteriology*

- Indispensable for the proper usage of bacterial names
- The culmination of 227 years of bacterial nomenclature
- Complements the new standards of bacterial nomenclature—1 January 1980
- The combined efforts of individual taxonomists

Approved Lists is an essential reference. It eliminates the need to search the world's literature simply for the sake of finding the first available name for an organism. In the past, strict observance of the rule of priority frequently resulted in the exhumation of a name never used after its initial proposal.

By contrast, the *Approved Lists* permits the scientist to ascertain rapidly and easily whether an isolate is a member of a new species. The procedure now is to compare

the isolate with the type (or neotype) strains and the description of the species which closely resembles it and which are included either in the *Approved Lists* or in *International Journal of Systematic Bacteriology*, starting with the January 1980 issue.

Reference to the *Approved Lists* is absolutely essential for the proper conduct of taxonomic studies and for the correct usage of the names of bacteria.

1980. 200 pages. Clothbound. \$10.00.

A brand new book on a topic of clinical and research concern —

Immunobiology of *Neisseria gonorrhoeae*

Editors: Geo. F. Brooks, Emil C. Gotschlich, King K. Holmes,
William D. Sawyer, Frank E. Young

Introduction by: William S. Jordan, Jr., and Milton Puziss

In the last few years, intensified interest in the study of gonococci and gonorrhea has resulted in an explosion of knowledge and understanding of the disease. In January 1978, a group of leading scientists and clinicians met in San Francisco for three days to confer about the current status of research into *Neisseria gonorrhoeae*.

The result is a book, at times controversial, always thought-provoking, on the status quo of a sexually transmitted disease which has reached epidemic proportions.

The book covers six major areas, and includes over 70 papers. The main sections are:

- I. *Neisseria gonorrhoeae* Physiology, Genetics, and Antimicrobial Susceptibility
- II. *Neisseria gonorrhoeae* Cellular Antigens and Antigenic Analysis
- III. Pathogenicity and Immunity
- IV. Immunity and Vaccine
- V. Current Concepts and Future Strategies
- VI. Panel Discussion

This new book will have wide appeal to clinical microbiologists, public health specialists, specialists in infectious diseases, venereologists, immunologists, and practicing physicians.

Note

Nongonococcal Urethritis and Related Infections is still available, and provides useful material on venereal disease caused by the microorganisms *Chlamydia trachomatis* and *Ureaplasma urealyticum*. Edited by Derek Hobson and King K. Holmes, this book was based on an interdisciplinary workshop held in April 1976.

Ordering Information

Immunobiology of *Neisseria gonorrhoeae*:

September 1978, 422 pages, clothbound. ISBN: 0-914826-18-2. \$15.00

Nongonococcal Urethritis and Related Infections:

July 1977, 391 pages, clothbound. ISBN: 0-914826-12-3. \$14.00

Members of ASM may purchase either of these books for personal use only, at the special member price of \$10.00. Payment must accompany order. All overseas orders must be prepaid.)
