

# ACCU-QUICK<sup>TM</sup>

## MICROGRAD<sup>TM</sup>

### FOR TOTAL ELECTROPHORESIS

ACCU-QUICK<sup>TM</sup> MICROGRAD<sup>TM</sup> is the versatile choice for total electrophoresis. Ideal for analytical and general research applications. It can be operated using our precast gels or you can cast your own. Setup is quick, easy and safe.

- SDS runs in 6-10 minutes
- Range of 27 precast gels
- Safe and easy to use
- Total Reproducibility
- Ready-to-use stains and buffers

FOR:  
2-D, IEF, Gradient, Homogeneous  
and Preparative Electrophoresis

©1980 ACCURATE CHEMICAL

PROD. NO.	DESCRIPTION	PRICE

**Behind in your reading? ASM review journals can help.**

Quarterly, 600 pages. ISSN 0893-8512.

## Clinical Microbiology Reviews

Editor: Josephine A. Morello

Editorial Board: Joseph M. Campos, Judith E. Domer, Lynne Garcia, Timothy E. Kiehn, Kenneth J. Ryan, Christine C. Sanders, Thomas F. Smith, and Kenneth D. Thompson

Announcing ASM's first new review journal in 50 years! Since its debut in January 1988, *Clinical Microbiology Reviews* has enjoyed an enthusiastic response from clinical workers and researchers around the world, reaching a subscription base well over 5,000 in its first year. One reason for CMR's immediate success is the tremendous need of the scientific and medical community for timely and authoritative reviews of the most important developments in all aspects of clinical microbiology. The reviews are written and edited to be very useful not only to laboratory directors and infectious disease specialists but to all workers, including bench technologists.

Topic areas addressed in CMR include **new diagnostic laboratory technology, specific pathogens or groups of pathogens, clinical and laboratory aspects of infections, and antimicrobial agents and their applications.**

## Microbiological Reviews

Editor: John L. Ingraham

Editorial Board: John A. Breznak, Rowland H. Davis, Franklin M. Harold, Wolfgang K. Joklik, Frederick C. Neidhardt, Catherine L. Squires, Eric J. Stanbridge, and Olen C. Yoder

Reading *Microbiological Reviews* is one of the best ways to keep abreast of significant developments and to broaden one's basic knowledge across all areas of microbiology and immunology. Established since 1937 as the definitive review journal, *Microbiological Reviews* publishes timely and authoritative in-depth reviews to serve the interests of all microbiologists. Of the thousands of journals and serial publications in science, *Microbiological Reviews* enjoys the second highest impact factor in terms of number of citations per article, second only to the *Annual Review of Biochemistry* (from *I.S.I. Science Citation Index*).

Quarterly, 650 pages. ISSN 0146-0749.

# ADP-Ribosylating Toxins and G Proteins

## Insights into Signal Transduction

Edited by **Joel Moss** and **Martha Vaughan**, *National Heart, Lung, and Blood Institute, National Institutes of Health, Bethesda, Maryland*

The contents of this important synthesis and the expert contributors span the disciplines of microbiology, biochemistry, molecular biology, and pharmacology to review current knowledge about ADP-ribosylating toxins, guanine nucleotide-binding proteins, receptors, and signal transduction. Recombinant DNA technology has been applied to elucidate the molecular basis of action of these bacterial toxins, which are responsible in part for the syndromes characteristic of a number of infectious diseases.

This book will very effectively update interested scientists and students on the current status of research into ADP-ribosylating toxins and related topics and will point the way for future advances.

### CONDENSED CONTENTS

**I. Bacterial ADP-Ribosyltransferases: Toxins and Related Proteins** (9 chapters by Collier, Bodley and Veldman, Wick and Iglewski, Ui, Aktories and Just, Aktories et al., Mekalanos and DiRita, Fishman, and Murphy and Strom)

**II. Guanine Nucleotide-Binding Proteins Coupled to Signal Transduction in Animal Cells** (13 chapters by Raymond et al., Kaziro, Spiegel, Birnbaumer et al., De Vivo and Gershengorn, Snyderman et al., Serventi et al., Manning, Gautam and Simon, Gibbs et al., Price et al., Takai et al., and Boback et al.)

**III. ADP Ribosylation in Bacteria and Animal Cells** (6 chapters by Lowery and Ludden, Jacobson et al., Williamson and Moss, Iglewski and Fendrick, Ueda, and Miwa and Sugimura)

Hardcover (ISBN 1-55581-017-9)

March 1990

585 pages, illustrated, color plate, index

# Molecular Basis of Oral Microbial Adhesion

EDITORS: Stephan E. Mergenhagen and Burton Rosan

## SECTIONS:

- Advances in Mechanisms of Microbial Adherence
- Adherence to Oral Soft Tissues
- Bacterial Adherence to Hard Tissues
- Salivary Components Influencing Bacterial Adherence
- Intergeneric Coaggregation between Oral Bacteria
- Genetic and Environmental Influences on Bacterial Adherence

1985

232 pages. Clothbound.

ISBN 0-914826-74-3

# PHYSICAL AND GENETIC MAP OF *ESCHERICHIA COLI*

## Call for Contributions

The *Journal of Bacteriology* will publish in brief text or tabular form and on a quarterly basis the physical locations of genes and loci assigned to the *Escherichia coli* chromosome. This information can be presented by the unambiguous identification of a matching restriction pattern or by the assignment of a gene or locus to a particular  $\lambda$  phage from the "Miniset" library. Manuscript should be submitted in duplicate to the ASM Publications Department. All parts must be typed double spaced. Galley proofs will not be sent to the authors, and no page charge(s) will be assessed for these contributions. Reprints will not be available. For a more complete description of these submissions, see the January 1990 issue of *ASM News*, p. 6-7.

# *ESCHERICHIA COLI* AND *SALMONELLA* *TYPHIMURIUM* CELLULAR AND MOLECULAR BIOLOGY

More is known about *Escherichia coli* and its close relative *Salmonella typhimurium* than about any other organism. The wealth of information from several decades of intensive study has never before been assembled to permit an assessment of current knowledge and facilitate future research.

Written by over 100 leading biologists under the guidance of an editorial board representing diverse scientific disciplines, this two-volume set presents a comprehensive synthesis of the entire body of current knowledge on *E. coli* and *S. typhimurium*.

This landmark publication should prove fascinating and extremely helpful to all investigators and students of the most fundamental biological questions in genetics, molecular biology, biochemistry, and microbial and cellular physiology and regulation.

## CONDENSED CONTENTS

PART I. MOLECULAR ARCHITECTURE AND ASSEMBLY OF CELL PARTS

PART II. METABOLISM AND GENERAL PHYSIOLOGY

A. Class I Reactions: Generation of Precursor Metabolites and En-

ergy; B. Class II Reactions: Conversion of Precursor Metabolites to Small-Molecule Building Blocks; C. Class III Reactions: Formation and Processing of Polymers; D. Energy for Cell Activities

PART III. GENOME AND GENETICS

A. The Genome; B. Genome Alterations; C. Gene Transfer Techniques; D. Mapping Techniques; E. Useful Host and Mutant Strains/Recombinant-DNA Techniques

PART IV. REGULATION OF GENE EXPRESSION

A. General Mechanisms; B. Multigene Systems; C. Operon Regulation

PART V. GROWTH OF CELLS AND CULTURES

PART VI. ECOLOGY, EVOLUTION, AND POPULATION STRUCTURE

Publication date: June 1987

# International Journal of Systematic Bacteriology

Editor: W. E. C. Moore

Associate Editors: Robert L. Ghera, R. G. E. Murray,  
Herman J. Phaff, Erko S. Stackebrandt,  
and Joseph G. Tully

The *International Journal of Systematic Bacteriology* is published by the American Society for Microbiology as a service to the International Union of Microbiological Societies. It is the official journal of the International Committee on Systematic Bacteriology of IUMS. Papers deal with all phases of the systematics of bacteria, yeasts, and yeastlike organisms, including taxonomy, nomenclature, identification, characterization, and culture preservation.

Members of other societies in the IUMS who are not also ASM members can obtain personal subscriptions (one per IUMS member) at \$50.00 per year, a savings of \$100 off the standard nonmember price.

To take advantage of this special rate, complete the form below and return it to ASM.

Quarterly, 650 pages. ISSN 0020-7713

IAI 6/90

A comprehensive review of the field of sporulation research

# REGULATION OF PROCARYOTIC DEVELOPMENT

## Structural and Functional Analysis of Bacterial Sporulation and Germination

Edited by **Issar Smith**, *Public Health Research Institute, New York, N.Y.*,  
**Ralph A. Slepecky**, *Syracuse University, Syracuse, N.Y.*, and  
**Peter Setlow**, *University of Connecticut Health Center, Farmington*

The process of differentiation, by which a cell of one type gives rise to cells with a different morphology, physiology, and function, raises some of the most important questions in modern biology. This book presents an up-to-date review of current research on differentiation in procaryotes, especially in *Bacillus* and *Streptomyces* species, of which sporulation is the best studied example of this process. Other phenomena, i.e., the production of extracellular enzymes, antibiotics, and other secondary metabolites such as anti-insect spore crystals, all of which are of commercial importance, are reviewed. Thus, a nearly comprehensive picture of this spore field is given. Authors with specific expertise in the areas covered were chosen so that the emphasis would be on aspects not yet covered in detail or about which another viewpoint might be useful.

Microbiologists, biotechnologists, scientists in the food and pharmaceutical industries, molecular biologists, and workers interested in cellular differentiation will greatly benefit from this book, arising from the Tenth International Spores Conference, March 1988.

### CONTENTS

1. Revised Genetic Map of *Bacillus subtilis* 168 (Pigot)
2. Spore Thermoresistance Mechanisms (Gerhardt and Marquis)
3. Genetic Manipulation, Cloning, and Functional Analysis of Sporulation Genes in *B. subtilis* (Youngman et al.)
4. Trigger Mechanism of Bacterial Spore Germination (Foster and Johnstone)
5. Metabolic Regulation of Sporulation and Other Stationary-Phase Phenomena (Sonenshein)
6. Subtilisin: a Redundantly Temporally Regulated Gene? (Valle and Ferrari)
7. Competence Regulon of *B. subtilis* (Dubnau)
8. Sigma Factors and Regulation of Transcription (Moran)

9. Initiation of Sporulation (Smith)
10. Forespore-Specific Genes of *B. subtilis* (Setlow)
11. Dependence Pathways for the Expression of Genes Involved in Endospore Formation in *B. subtilis* (Losick and Kroos)
12. Temporal and Spatial Control of Gene Expression during Sporulation (Stragier)
13. Role, Structure, and Molecular Organization of the Genes Coding for the Parasporal Delta Endotoxins of *B. thuringiensis* (Lereclus et al.)
14. Sporulation in *Streptomyces* spp. (Chater)

This is my order for **Regulation of Procaryotic Development**.
