*Cover photograph* (Copyright © 2008, American Society for Microbiology. All Rights Reserved.): Confocal image of human epithelial cells (stained with tetramethyl rhodamine isothiocyanate-phalloidin [red]) infected with *Porphyromonas gingivalis* (stained with fluorescein isothiocyanate [green]). The image was analyzed by using Imaris version 5.0.1 software. A Z-stack of the *x-y* sections was converted to composite images with the iso surface and spot detection functions of the surpass option. The section view in the *x* and *y* axes was created by using the clipping function. The image was generated by Masae Kuboniwa. (*Related paper is on p. 2420.*)
