Sialoadhesin-transfected CHO cells were incubated for 1 h with fluorescein isothiocyanate-labeled *C. jejuni* (green). Living cells were put at 4°C, and sialoadhesin was visualized using 1C2, a monoclonal antibody against sialoadhesin, and a secondary Alexa Fluor 633-coupled antibody (red). Cells were fixed in 70% ethanol in glycerol and counterstained with 4',6-diamidino-2-phenylindole (blue). (See related article on p. 3237.)
