COVER IMAGE

Cover photograph: Stably transfected Et-EmPro, a transgenic *Eimeria tenella* line expressing the profilin gene of *Eimeria maxima* and reporter EYFP gene (enhanced yellow fluorescent protein gene) in its sporulated oocyst stage. The EYFP gene is controlled by a very strong promoter, the SAG13 (surface antigen 13) promoter derived from *E. tenella*, which efficiently drives high-level exogenous gene expression. The reporter EYFP is expressed in the cytoplasm and localized mainly in the nucleus of the sporozoites. The sporulated oocyst contains four sporocysts, each containing two sporozoites.
