

CONTENTS • APRIL 2019 • VOLUME 87, NO. 4

Cover photograph: Immunofluorescence analysis of murine brain section infected with *Neisseria meningitidis* 93/4286 serogroup C strain. Brain sections (10 μ m) were treated with a rabbit meningococcal antiserum and then a goat anti-rabbit Cy3 serum. The image shows an overview of the hippocampal region from a representative animal. Red, *N. meningitidis* immunostained with meningococcal antiserum; blue, DAPI (4',6-diamidino-2-phenylindole) staining of nuclei. (See related article at e00688-18.)
