COVER IMAGE

Cover photograph: Confocal microscopy image of *Histophilus somni luxS* mutant in bovine macrophages. The red spots indicate the location of Lysotracker, which indicates acidification of phagosomes following phagosome-lysosome fusion. The green arrows and spots indicate the bacteria. The yellow arrows indicate any colocalization of the marker and the bacteria. Neither the wild type (not shown) or the *luxS* mutant substantially acidified phagosomes, indicating a *luxS* mutation did not prevent inhibition of phagosome-lysosome fusion.
